

HOME IS NOW THE HEART OF CARDIAC REHAB

ROMTherapy™ home-based cardiac rehab can enhance your center-based program.

WHY ARE PHYSICIANS RECOMMENDING ROMTHERAPY™ HOME-BASED CARDIAC REHAB?

Challenges with Center-Based Rehab:

For the past 30 years, center-based cardiac rehabilitation has been the mainstay for improving outcomes in patients with heart disease. Despite the clear benefits, only 25% of cardiac patients attend their first rehab session, and only 6% actually complete all 36 sessions.*

Having to travel to and from a center is an obvious obstacle for patients who would benefit from participating in cardiac rehab. For many, it's too inconvenient.

And, even if participation did increase, current available center-based slots would accommodate only 41% of qualifying patients in the U.S.**

Now, there's a solution: ROMTherapy™ is an effective complement to your center-based program, reaching those cardiac patients who are not able to participate at your rehab center.

Cardiac patients who complete a cardiac rehab program have a 56% reduction in mortality in 10 years.*

10 REASONS CLINICIANS AND PATIENTS CHOOSE ROMTHERAPY™

01 Meets or Exceeds Medical Guidelines

The ROMTherapy™ System fulfills the stringent guidelines for cardiac rehab (CR), and often goes beyond what is required during the 36-session, 12-week program.

02 Cardiac Rehab Specialists

Expertly trained ROMTherapy CR Specialists provide individualized exercise and education, suited to each patient's particular needs. Plus, every patient gets multiple sessions with a cardiac-registered dietician.

03 At-Home Convenience

Patients simply set up an appointment with their CR Specialist and meet via the touchscreen. It's so convenient, patients are more likely to complete all 36 rehab sessions.

04 Effective

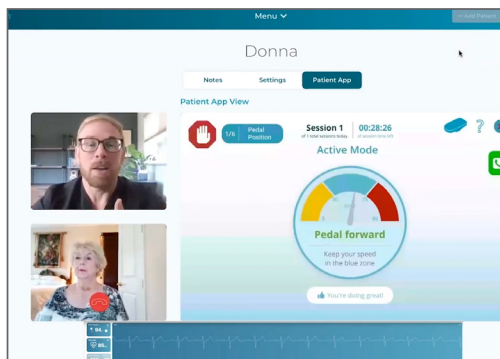

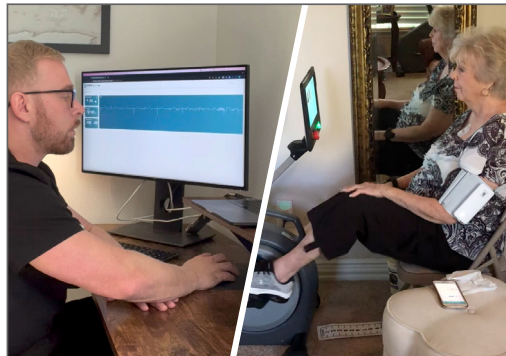

This first-of-its-kind, home-based cardiac rehabilitation system is proven to be as effective as center-based rehab—and, oftentimes more effective, as it enables patients to more easily comply with the complete, 36-session rehab program.

05 Remote Monitoring

ROMTherapy™ Bluetooth technology tracks patients' vitals during exercise and delivers the data to the CR Specialist, who monitors, supervises and evaluates progress—face-to-face, in real time. The specialist makes exercise adjustments based on in-the-moment assessments.

ROMTherapy collects the following data in real time:

- Heart Rate
- Continuous, Single-lead ECG
- 5-Minute Blood Pressures
- SpO2 Blood Oxygen Level

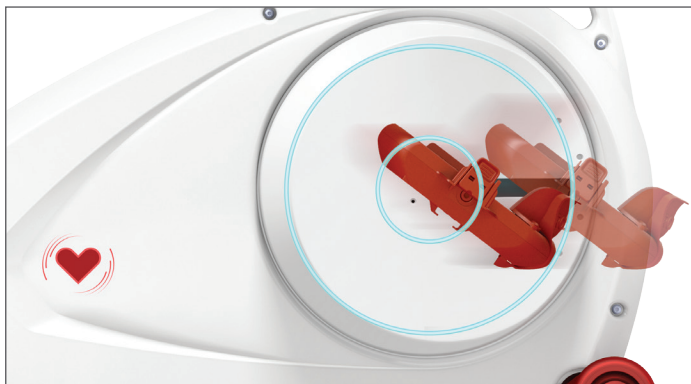

06 Safety

Personalized, real-time monitoring provides patients with safe, supportive, home-based rehab.

07 Personalized Rehabilitation

Range of motion adjustments and four pedaling modes allow for easy or more challenging rehab exercises based on a patient's assessment each day, and in each moment. CR Specialists can make device modifications remotely—in real time—providing safe, highly effective, personalized rehabilitation.

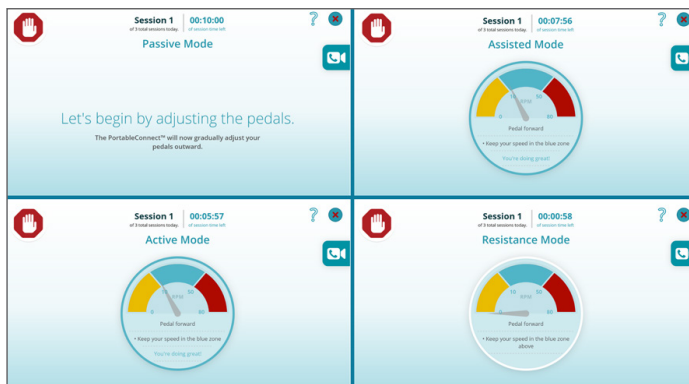

Proprietary Range-of-Motion Technology:

Our exclusive, range-of-motion technology provides incremental settings that are adjusted by the CR Specialist as a patient makes progress. The smallest setting allows patients to achieve a full rotation on Day One after surgery.

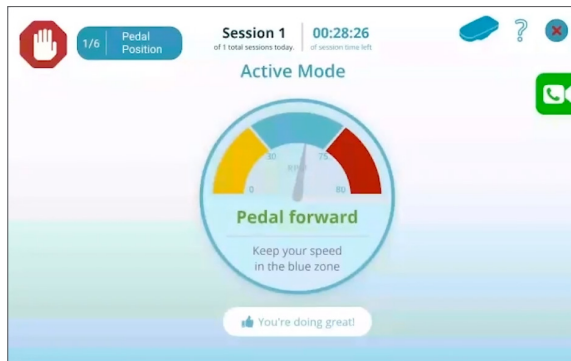

Four Pedaling Modes:

Patients who need pedaling help today may need to be challenged next month. ROMTherapy™ provides four modes—passive, active-assisted, active and resistance—to accommodate patient needs. Personalized exercise allows each person to recover at their own best pace.

08 ROMTherapy App

The proprietary app makes set up and connecting easy and intuitive via the touchscreen. A simple, easy-to-read interface allows for a user-friendly experience.

09 Engaging On-Screen Experiences

Patients interact with their congenial CR Specialist, plus experience virtual rides in places all over the world while they do their exercises. Cardiac rehab with ROMTherapy is not only enjoyable, it's fun!

10 Concierge Customer Service

A ROMTherapy Concierge is there all along the way to arrange delivery, get patients up and running, answer questions, help with insurance coverage and more.

WHICH PATIENTS ARE ELIGIBLE FOR ROMTHERAPY?

ROMTherapy is billed through insurance just like center-based cardiac rehab, except that it's delivered as a home-based option. Many cardiac patients are covered.

Medicare Part B covers home-based Cardiac Rehab and Intensive Cardiac Rehab for patients who experience one or more of the following:

- Acute myocardial infarction within the preceding 12 months
- Coronary artery bypass surgery
- Current stable angina pectoris
- Heart valve repair or replacement
- Percutaneous transluminal coronary angioplasty or coronary stenting
- Stable, chronic heart failure*

The “ROMTherapy One-Step Process” makes it easy for clinicians to refer, enroll and onboard patients.

“The greatest predictor of participation is the strength of the physician’s recommendation.”
